Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1724

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 8 “preferably” is vague and indefinite because it is unclear how this term further limits the claim.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jokinen 5,888,404 in view of Weissenberg et al. 6,368,511 and Blais et al. 6,855,256. Jokinen disclose (see col. 4 line 39 through col. 6 line 26) a method of treating sludge substantially as claimed. The claims differ from Jokinen by reciting that a Fenton’s reaction is used to form trivalent iron and free radicals to precipitate trivalent iron phosphate, and produce a deodorization and sanitation effect. Weissenberg et al. disclose (see col. 2 line 12 through col. 4 line 64) that it is known in the art to utilize Fenton reagent, to aid in reducing odor and dewatering sludge. Blais et al. disclose (see col. 6 line 24 through col. 9 line 38) that it is known in the art to utilize acid, hydrogen peroxide, and ferric iron to aid decreasing odor, destroying pathogenic organisms, and dewatering sewage sludge. It would have been obvious to one skilled in the art to modify the method of Jokinen by utilizing the recited Fenton’s reaction in view of the teachings of Weissenberg et al. and Blais, to aid in deodorizing, sanitizing, and dewatering the sludge. The specific pH, time period, molar ratio, amount, and solids content utilized, would have been an obvious matter of process optimization to one skilled in the art, depending on the specific sludge

treated and results desired, absent a sufficient showing of unexpected results. With regard to claims 10 and 11, it is submitted that Blais et al. as applied above disclose that it is known in the art to utilize a centrifuge to dewater sludge.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
